

ISO 42001:2023 AIMS Services

Build responsible AI practices and lead the way in ethical AI management

Why Sekuro

We bring more than a decade of hands-on experience designing, establishing, and maintaining management systems certified to ISO standards for organisations of all sizes, across both global and local contexts. Our proven methodology goes beyond checkbox exercises, taking an intent-based approach to governance that enables organisations to effectively manage and reduce risk.

Every AI Management System (AIMS) we implement is tailored to your organisation's specific needs, governance mechanisms, and maturity level. Where existing management systems such as ISO 27001 or ISO 9001 are already in place, we leverage these to deliver a more integrated, efficient outcome—reducing duplication and maximising the value of your existing investment.

Service Overview

AI is transforming how organisations operate—bringing opportunity alongside complexity. An AI Management System (AIMS) provides the governance structure to maximise AI's benefits, while promoting safer, more responsible practices. AIMS can be adopted alongside existing frameworks such as ISO 27001 and ISO 9001. Our ISO 42001:2023 services support your path to certification, with an approach tailored to your organisation's unique drivers, readiness level, and existing controls.

KEY BENEFITS

- Understand and manage AI risks at an organisational level.
- Set up governance structures and demonstrate commitment to ethical, responsible use of AI.
- Proactively address AI legal and ethical obligations.
- Enhance data privacy and AI decision-making transparency.
- Build trust and credibility with stakeholders.
- Support competitive differentiation and market positioning.
- Integrate with existing ISO management systems.

Our Approach

Establishment and Training

Establish and train your staff to effectively operate AIMS compliance with ISO 42001. Follow the plan-do-check-act (PDCA) cycle prescribed by ISO standards.

Assess Risk and Create Your Roadmap

Assess your security risk and create an associated risk treatment plan. This serves as a practical roadmap for security officers, providing the evidence needed to build compelling business cases and secure funding.

Integrated Management Plan for Large Organisations

Leverage existing security and risk management frameworks to deliver a more integrated management system. This reduces duplication and ensures consistency across your governance environment.

Our experts collaborate closely with your team to ensure the AIMS is genuinely operational—not a document that sits on a shelf.
