

Cisco Network Assessment

Reduce complexity and
improve network resilience

Business challenge

As organisations expand to support hybrid work, cloud adoption, and Zero Trust initiatives, maintaining a secure and compliant network becomes increasingly complex. Many struggle to identify non-compliant network elements and configurations that may compromise performance, security, or regulatory alignment. A Network Customer Assessment helps uncover these gaps, ensures adherence to best practices and security policies, and optimises the network edge to meet evolving business demands with confidence.

How we help

The Network Customer Assessment provides a comprehensive evaluation of your network infrastructure, identifying non-compliant elements and configurations that may undermine security, performance, or compliance. Our experts align your network design with industry frameworks such as NIST and Azure's Cloud Operating Model, ensuring your network is optimised to support hybrid work, cloud adoption, and Zero Trust initiatives.

The assessment includes a detailed review of your network edge, helping you address critical security challenges with clarity and confidence. By undertaking a Network Customer Assessment, your organisation will gain:

- Enhanced visibility into network security gaps and non-compliant elements
- Actionable recommendations to remediate vulnerabilities and optimise performance
- Alignment with industry frameworks and best practices
- Improved security posture and compliance
- Confidence in your network's ability to support evolving business demands

Duration:

2-4 Weeks

(based on size and complexity
of your network environment)

Benefits:

- Clear visibility into network risks
- Steps to fix vulnerabilities
- Best practice alignment
- Improved security and compliance
- Future-proofed network
