

Security Productivity Envisioning Session

Empowering Secure and Productive
Workplaces with Microsoft 365 E5

Overview & Problem Statement

In today's rapidly evolving digital landscape, organisations face increasing challenges in balancing security with productivity. The proliferation of remote work, cloud services, and AI technologies has introduced new vulnerabilities and complexities in IT environments. Security leaders must ensure robust protection while enabling innovation and efficiency. The Security Productivity Envisioning Session addresses these challenges by showcasing the business value of Microsoft 365 E5 licenses and tools, providing a strategic approach to secure productivity and AI readiness.

What to Expect

This workshop is designed to showcase and demonstrate the business value of Microsoft E5 license and the tools it encompasses. Key focus areas include:

- Secure productivity tools
- AI-ready business protection
- Zero trust principles applied to Microsoft 365 Copilot
- Optimising IT enablement

By the end of the session, participants will:

- Gain a comprehensive overview and hands-on experience with Microsoft 365 E5 solutions, focusing on endpoint management, identity protection, and data governance
- Be equipped with a strategy and approach to secure generative AI adoption, deployment, and use, enabling employees to boost productivity and innovation
- Understand how to apply zero-trust principles to Microsoft 365 Copilot, ensuring secure access, mitigating device risk, and protecting data in applications
- Have a clear roadmap for implementing high-value scenarios with Microsoft 365 E5, including recommendations and agreed next steps

Who Should Attend

- Chief Information Security Officer (CISO)
- Chief Information Officer (CIO)
- Chief Security Officer (CSO)
- Chief Technology Officer (CTO)
- Endpoint management owners/decision makers
- IT Security and Operations

Duration

Approximately 3 hours
