

Intelligent Discovery & Analysis for Microsoft 365

Better Data, Better Decisions

As Microsoft 365 continues to grow as a central working platform for users everywhere, managing storage and its associated costs has become a critical concern. Organizations increasingly require a comprehensive capability for performing Discovery and Analysis to better understand the storage challenge. From there, reporting and action based on the analysis results help streamline the process about making informed decisions about what needs to be kept online or removed.

The value of the Discovery and Analysis feature in AvePoint Opus is to give you the insight you need to make the decisions about your data to achieve cost control, compliance, and future-proof your investment in M365 as a central repository.

Our Intelligent Discovery & Analysis includes:

COST CONTROL

The Discovery process identifies redundant, obsolete, or underutilized data, allowing you to make informed decisions on archiving, deletion, or lifecycle policies. By eliminating unnecessary data, you can significantly reduce storage costs and optimize your investment in Microsoft 365.

RISK AND COMPLIANCE

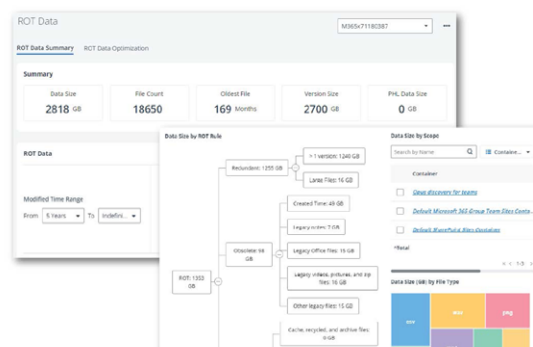

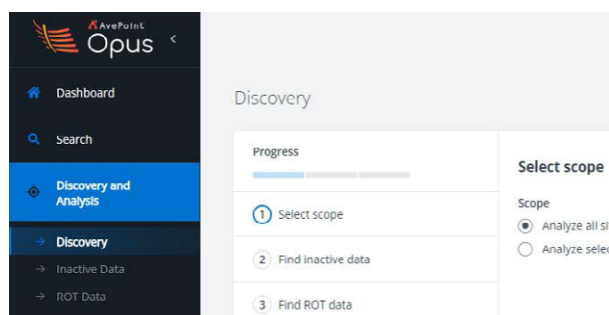

Ensures compliance with data retention policies and to meet regulatory requirements. By identifying redundant, obsolete, or trivial (ROT) data, implementing robust retention controls, and refining your information lifecycle, mitigate risks and ensure data security. Prioritize responsible information management, ensuring that your data is retained only as necessary, and keep your workspaces organized.

FUTURE-PROOFING

As your organization grows, so does the volume of data in Microsoft 365. This solution provides a scalable and adaptable engine that accommodates your evolving storage needs, and plans for future initiatives like Microsoft Copilot by having a strong data foundation.

Explore the Possibilities: Stay ahead of future storage growth with the Discovery & Analysis solution in AvePoint Opus as your gateway to proactive and effective information management.

DISCOVER AND ANALYZE

- Quickly specify your scope and choose between out-of-the-box or customized rules for identifying inactive and ROT content, streamlining the process.
- Enjoy a user-friendly interface that ensures a seamless experience, allowing focus on strategic decisions while the tool efficiently uncovers valuable insights.
- Benefit from high-level dashboard analysis on SharePoint sites, facilitating easy monitoring and management.
- Identify redundant, obsolete, and trivial (ROT) data, as well as large file types or duplicate files, enabling targeted cleanup and optimization efforts.

REPORT AND ACTION

- Leverage intuitive reporting screens for immediate storage optimization and removal of stale content.
- Independent reports available to summarize inactive and ROT content with adjustable filters like time range, file size, type and container restrictions, to ensure clarity and precision.
- ROT Summary provides additional insights like classification for targeting action, files by type to help in focused remediation strategies and comparing ROT to total data for a quantifiable measure, enabling your organization to set priorities on cleanup efforts.
- Take immediate action by defining and running a storage optimization rule to archive or destroy.
