Chrome OS Enablement Program for Enterprise

Ensure success of your Chrome OS Enterprise deployment.

Business challenge

Today, the remote workforce is expanding faster than anyone could have predicted. For most business leaders, making sure remote workers have the devices they need to stay productive, no matter where they choose to work, has become a top priority.

Google's cloud-based Chrome OS devices allow for ultimate workplace flexibility, but expert guidance and effort may be required around cloud readiness, configuration, applications, security, support and more. Insight's pre-deployment, professional and managed services are designed to address such concerns. Take a deep dive into our Chrome OS Enablement Program services offering below and discover how Chrome devices could be the best viable option for your modern workplace.

Our solution

Insight's Chrome OS Enablement Program is a robust and holistic tiered-services offering combining our white glove pre-deployment, professional and managed services. Designed to enable bulk deployment and management of Chrome OS devices, the program can scale to meet the needs of large enterprise organisations with thousands of devices, as well as organisations with as few as 50 devices.

|	
Essentials	The Essentials service tier provides comprehensive device enrollment and configuration services to ensure that your devices are ready to use out of the box, as well as fully enrolled in your domain and assigned to a designated Organisational Unit (OU) group. Additionally, each device is asset tagged and recorded in the Google Administration Console.
Advanced	Our Advanced service tier provides a comprehensive technical Chrome OS Readiness Review of your environment, as well as complete configuration of the Google Administration Console. In our Readiness Review, we'll work with you to identify business needs and determine criteria for the successful implementation and deployment of Chrome OS devices. Based on a detailed analysis of your current environment, we'll recommend steps for fully enabling and supporting your Chrome OS devices. Our Chrome OS Technical Configuration provides full configuration of the Google Administration Console, including configuration of OU group policy, domain registration, role-based administration and integration of cloud identity solutions for Single Sign-On (SSO), as well policy creation and configuration.
Premier	Insight's Chrome OS Enablement Premier service tier offers all of the assessments and services in the Advanced tier and also includes a comprehensive Chrome OS Operations Guide that provides best practices for critical administrative tasks for key areas, including: end-user communication, migration and deployment, and application access methods, developed to ensure a successful deployment. Additionally, Insight will develop customised end-user training materials and activities, focused on enrollment procedure, technical restrictions and application access, as well as curated training content from Google to ensure the best possible end-user experience.

Benefits

- Enable your remote workforce.
- Get devices that are ready to use out of the box.
- Ensure a successful Chrome Enterprise device deployment.
- Lower total cost of ownership.
